OPTICAL SORTING MACHINES FOR SALT INDUSTRY

Salt is a mineral used worldwide and commercialized for various uses in industrial and food applications. It may contain various impurities in the form of dark stones, foreign bodies, and color defects, despite this, producers must be able to achieve high and diversified quality standards.

Elica ASM, a company operating in the optical sorting machines sector for more than 30 years, has developed a machine specifically designed for the sorting of this mineral, taking into consideration its optical as well as mechanical peculiarities, and guaranteeing high quality production.

The constructive characteristics of the machine ensure maximum performance and stability in a saline environment.

MOST WIDESPREAD DEFECTS OF SALT

SHELLS

PEBBLES
AND STONES

DARKER SALT

 **ELICA ASM SOLUTIONS**
ITALIAN SORTING EXCELLENCE

VISION

Professional optical sorting machine ideal for salt sorting in a version entirely made of stainless steel, to guarantee maximum yield and longevity by working in a saline environment.

- shell contamination
 - pebbles or stones
 - darker or lighter grains
- an effective solution with the right price-quality ratio.
